FEEDING INSTRUCTIONS: AGRI-BLOK™ 10:6 Range Sheep Mineral Block is designed to be fed free-choice, and would normally be fed when cereal, or grass/ legume mixtures forages make up most of the diet, along with the option of grain feeding. Blocks should be placed near water or loafing areas to assure maximum exposure to sheep. Place 1 x 2 block for every 50 sheep - every 25 days. For a smaller number of sheep, AGRI-BLOK™ is available in 25 kg (4-cell Breakaway Pak - 4 x 6.25 Kg) and 2.5 Kg Mini-Pak. Regulate the blocks in the manner so that intake would be approximately 20 grams per head per day on mature animals. NOTE: Because AGRI-BLOK™ is offered free-choice, intake may vary under various circumstances, therefore, one should monitor intake to achieve the best nutritional and economic benefits from your AGRI-BLOK™ feeding program.

NOTES: 1. Ensure water is available free-choice at all times. 2. You may use the cardboard box as a feeder by trimming the sidewall to the top of the bottom lid, or completely remove the paper and place in feeders.

CAUTION:

1. Directions for use must be carefully followed.
2. Because this feed contains added copper and selenium, a proper evaluation on local requirements must be made by a qualified veterinarian or nutritionist prior to the use of this product.
3. Do not use this feed in association with another feed containing supplemental selenium and copper.
4. Individual results from the use of this product may vary due to management, environment, genetic, health and sanitation differences, therefore, Canadian Agri-Blend Inc. does not warrant or guarantee individual results.
